

Q.1 →

a data driven wizard is a tool or module in automated testing that allows tests to be executed with multiple sets of input data from external sources like excel, csv or databases, without modifying the test scripts.

Q.2 →

- i] enables testing various input/output combinations efficiently.
- ii] Focuses on validating functional behavior, not code logic
- iii] Reduces manual repetition & increases coverage.

Q.3 →

- (i) identify the test scenarios & expected outcomes.
- (ii) prepare input data sets (excel, csv etc).
- (iii) configure the data driven wizard to read the data.
- (iv) execute automated tests for all data set.
- (v) compare actual vs expected results & report defects.

Q.4 →

- i] supports large volume of test data.
- ii] Reduces manual efforts & repetitive testing.
- iii] Improve test coverage & accuracy.
- iv] allows easy maintenance of tests when data changes.
